KHW Maschinenbau GmbH

Cork-lock

Cork compression unit

Description

**Patented cork compression concept - long life guarantee.
A profitable investment!**

The patented cork compression system stands out due to its high durability. It is made entirely of high grade stainless steel. The four dies are made of specially hardened stainless steel and coated with a high tensile and food grade covering.

The dies can be exchanged without any problems. The rest of the cork lock remains intact.

The locking pins and the bearing bushings are also hardened and coated, thus rendering grease lubrication obsolete. Corks with a diameter of 19-26 mm and a length of 32-50 mm can be used.

This is a low maintenance model, that guarantees an extremely long life cycle.
